

Dr. Henry Bory Prevez

Full Professor · PhD in Automatic Control · Universidad de Oriente, Santiago de Cuba

Automatic Control · Power Electronics · Renewable Energy · Scientific Software · Applied Modelling

Executive profile

Full Professor and PhD in Automatic Control with university teaching experience since 2002. His academic and technological work connects advanced control, power electronics, isolated micro-hydropower systems, OTEC and ocean energy, scientific software, virtual laboratories and applied mathematical modelling.

Core areas

- Automatic control, advanced control, fuzzy control and model predictive control.
- Power electronics, converters, electrical systems and frequency regulation.
- Renewable energy systems: Pelton micro-hydropower, OTEC and ocean energy.
- Modelling, simulation, system identification and digital signal processing.
- Scientific and academic software for teaching and applied research.

Selected academic and technological results

- Participation in international projects such as CRECE and IRIS.
- Scientific publications on micro-hydropower, power electronics, OTEC, COVID-19, educational software and computational biophysics.
- Software and records associated with Niord, AnaRed, TabPer, Cal_Arr_Fre and Calc_Covid19.

Recommended use

Executive version for international cooperation, academic networking, project presentation and institutional first contact. For full academic evaluation, use the extended academic CV.
